ABSTRACT

This report compiles 1974-75 enrollment data for 179 American two-year post-secondary institutions. The report focuses on enrollment by academic program within four types of two-year institutions: community colleges; junior colleges; technical colleges, schools, and institutes; and technical/vocational colleges, schools, and institutes. The total enrollments by academic program area for all four institutional types were: trades and industrial--22,512 (8.5 percent); technical--29,403 (11.2 percent); natural sciences--8,404 (3.2 percent); health--25,768 (9.8 percent); arts and humanities--75,150 (28.5 percent); social science and public service--32,623 (12.4 percent); business contact and marketing--29,251 (11.1 percent); and business detail and office--40,410 (15.3 percent). Total enrollment was 263,521 for the 179 reporting institutions. Program enrollment data are further broken down by sex, and full-time or part-time status. Freshman full-time enrollments are separately presented. In comparison to the 1973-74 report, the data suggest that career education programs are still growing, and transfer programs are lagging slightly behind. Data are arranged into 12 tables which are discussed in a short introductory narrative section. (NHM)

The American College Testing Program (ACT) is dedicated to the enrichment of education. It was founded as a public trust and operates as a nonprofit corporation governed by elected educational representatives from individual states or regions, and by a Board of Trustees.

A fundamental goal of ACT is to exercise educational leadership through guidance-oriented assessment and research services in order to (1) assist in the identification and solution of educational problems and (2) communicate to the general and professional publics knowledge and ideas about education.

The chief beneficiaries of ACT's services are students, secondary schools, institutions of postsecondary education, and educational researchers.

ACT, a nonprofit organization, is an Equal Opportunity Employer.

CAREER EDUCATION AND TRANSFER PROGRAM ENROLLMENTS IN 2-YEAR COLLEGES, 1974-75

Garland G. Parker

Few facets of American postsecondary education reveal such sharp reflections of current emphasis in academic pursuits beyond high school with a sparser statistical background than enrollments in career and transfer-oriented programs in American 2-year colleges. Since 1972-73, when The American College Testing Program (ACT) began to support a study series on enrollments in 2-year colleges, special attention has been given to career education and transfer program enrollments. A particular objective was to provide information unavailable elsewhere on the rationale for, importance and growth of, trends in, and statistics on career education enrollments as well as on transfer program enrollees. In 1973-74, ACT supported and published the first special report on career education and transfer program enrollments.[1] This second such report also is the third and concluding study of collegiate enrollments for 1974-75 sponsored by ACT and the University of Cincinnati.[2]

The career thrust in 2-year institutions. In the last 25 years, the rise of career education has been one of the most prominent developments in postsecondary education. In that period, the 2-year colleges have led the way in fostering, nurturing, and refining academic programs designed to facilitate direct career entry for the students pursuing them. Definitions of career education vary with the users of the term, but it has been interpreted by this author to connote a selection of programs offered in secondary as well as postsecondary institutions, increasingly since the 1950s, designed to

facilitate direct job entry into specialized career paths after 2 years of collegiate-level training.[3] Although the stress was upon the "superior" student in the 1950s and the arts and sciences were the preferred disciplines in the so-called "golden" years for higher education in the 1960s, in both decades career education programs enjoyed an accelerating development that was associated particularly with the rise of the 2-year colleges. The onrush of technological development, industrial and social change, governmental expansion, enhanced need for service personnel in an increasingly complex environment, and the rising demand for retraining, refresher, and continuing education courses to provide adequate response to changing conditions in the world of work were all factors that contributed greatly to the growth of career education. In the unsettled 1970s, when recession conditions, job scarcities, and security concerns commanded the attention of collegiate enrollees in degrees unprecedented in the lives of most young people, career education assumed an even more important role than in the past. As will be noted and supported by data later, career education in 1974-75 has remained on an expansion course and promises still to loom as a mother lode in its attraction for students in the next decade as they continue to push on toward their vocational goals on the programmatic trailways of postsecondary education. The 2-year colleges have a long lead over their 4-year counterparts in the provision of career education program paths for their students to follow. The prime purpose of this study is to share as much data and interpretation as possible on the programs for and 1974-75 enrollments in career education in the 2-year postsecondary institutions.

Perspective on program enrollments. In ACT Special Report Fourteen, which emphasizes enrollments in 2-year colleges generally, there is an analysis of student numbers by types of schools attended.[4] In this report, the focus is primarily upon enrollments by programs, but within the tables attention is given to types of schools. Given the fact that program enrollments require much more sophisticated, complicated, and comprehensive data production and analysis techniques than does the provision of simple headcount figures, it follows that the schools supplying data for this report are fewer in number than those that reported for the more generalized study. Even so, it is significant and satisfying to the sponsors and the author that usable counts were provided by 179 2-year postsecondary institutions for the supplementary questionnaire which accompanied the survey form for general study and provided the basis for

---

[3]Special attention was given to the definition and role of career education in earlier annual reports by this author. See Garland G. Parker, "Enrollments in American Two-Year Colleges, 1972-73: Statistics, Interpretation, and Trends," *Intellect* 101:2349 (April 1973), 460; and "Enrollments in American Two-Year Colleges, 1973-74: Statistics, Interpretation, and Trends," *Intellect* 102:2357 (April 1974), 463.

[4]Parker, *Collegiate Enrollees in American 2-Year Institutions, 1974-75*, pp. 3-7.

this analysis. In the tabulations, institutional data are set forth indicative of enrollments in both career education and transfer-oriented programs as well as by men, women, full-time, part-time, and grand total categories. Since, to our knowledge, such enrollment by program detail is unavailable elsewhere, it is hoped that the data will be helpful even beyond the interpretation offered here for other researchers. The definitions basic to this study are set forth on pages 6-7.

Focus on career and transfer program enrollments by institutional types. A view of the spread of overall enrollments by program in the different types of schools is revealing of the role of career education vis-à-vis transfer curricula in the 2-year institutions (see Tables 1-5). In the 75 junior colleges that reported enrollments completely and comparably, there were 48,092 students in the fall of 1974. This was 13.8% of the students enrolled in all 179 reporting institutions. Of the junior college total, 56.4% were women, of whom 18.8% were part-time and 81.2% were full-time students. Of the total, 43.6% were men, with 20.6% part time and 79.4% full time.

In 49 community colleges reporting 155,385 registrants, 54.7% were men; of them, 49.2% were part time and 50.8% full time. Women comprised 45.3% of the total; 57.2% of them were part time and 42.8% were full time. The 37 technical institutions reporting showed a total of 43,783, with men accounting for 58.7% of the total. Of these, 49.2% were part time and 50.8% full time. Women equaled 41.3% of the total, with 44% of them attending part time and 56% full time. In the 18 technical/vocational units providing data, there were 16,361 enrollees, with 65.3% men and 34.7% women. Of the men, 42.2% were part time and 57.8% full time, while 30% of the women were part time and 70% full time. In all 179 reporting schools with 263,521 students, 54% were men, of whom 44.4% were part time and 55.6% full time. Of the same total, 46% were women, with 45.4% of them being part time and 54.6% full time.

Enrollments by programs in 179 reporting institutions. An indication of the number of students in all 179 schools enrolled in the various curricula, both career and transfer, is very revealing as to the program choices made by the students. The following tabulation indicates enrollments of men, women, total students, and the percent of the total enrolled by programs in the 179 reporting schools: trades and industrial, 20,447 men, 2,065 women, 22,512 total, and 8.5% of all enrollees (91% men and 9% women); technical, 25,373 men, 4,030 women, 29,403 total, and 11.2% of all (86% men and 14% women); natural sciences, 4,960 men, 3,444 women, 8,404 total, and 3.2% of all (59% men and 41% women); health, 3,443 men, 22,325 women, 25,768 total, and 9.8% of all (13% men and 87% women); arts and humanities, 36,491 men, 38,659 women, 75,150 total, and 28.5% of all (49% men and 51% women); social science and public service, 17,958 men, 14,665 women, 32,623 total, and 12.4% of all (55% men and 45% women); business contact

and marketing, 19,669 men, 9,582 women, 29,251 total, and 11.1% of all (67% men and 33% women); business detail and office, 13,860 men, 26,550 women, 40,410 total, and 15.3% of all (34% men and 66% women); and, in summation, 142,201 men, 121,320 women, and 263,521 grand total, of which 54% were men and 46% women. The enrollment total for the essentially transfer-oriented programs (natural sciences, arts and humanities, and business contact and marketing) was 112,805, or 43% of the total. The fact that the remaining 57% elected basically career programs is supportive of earlier observations on the importance of career education in the 2-year institutions and in society as a whole. Nevertheless, the finding that 43% of the total students reported were enrolled in curricula designed both for transfer purposes and to lead to baccalaureate degrees suggests that the mission of the 2-year schools is by no means limited to career education programs. Indeed, when consideration is given to the fact that many students enrolled in the so-called career education programs intend to and will transfer into 4-year technology programs, it is likely that well over 50% of the 2-year enrollees have baccalaureate goals or, at least, possibilities. The arts and humanities, it may be noted, with 29.3% of all enrollees, was by far the most popular of the programs tabulated in this report. Business detail and office was in second place at 14%, and social science and public service tied for third place with business contact and marketing at 11.1% each. Technical was in fifth place with 10.7%; health was next with 9.5%; and trades and industrial with 8% and natural sciences at 7.3% followed. A look at the charts will reveal, also, that even in the technical and vocational schools many students elected programs in the arts and humanities.

Freshman enrollment overlook in 179 reporting schools. The statistical picture of full-time freshmen in the 179 institutions that reported completely and comparably on a program enrollment basis is depicted in Tables 7-12. The impact of full-time freshmen upon total enrollments as well as upon the spread of academic programs underscores their importance in the post-secondary scheme of things.

In 75 reporting junior colleges, there were 23,987 freshmen who accounted for 24.2% of the total in all 179 schools; of that number, 57% were women and 43% men. The 49 reporting community colleges enrolled 51,324 or 51.8% of the grand total, of which 42% were women and 58% men. In 37 technical schools, the count was 16,423, 16.6% of the total, with women comprising 45% and men 55%. For 18 technical/vocational institutions, the enrollment was 7,390, 7.4% of the total, women amounted to 39% of the total figure while men rose to 61%. In all 179 institutions, 46% of the enrollees were women and 54% were men, by coincidence the same proportions as for the grand total enrollments in the same units.

Freshman program choices in the 179 reporting institutions. It was in their program elections that the freshmen demonstrated their preferences in

respect to career education or transfer objectives in the reporting 2-year colleges as follows: trades and industrial (82 schools), 9,011 men, 732 women, 9,743 total, or 9.8% of all enrolled freshmen, of whom 92% were men and 8% women; technical (105 schools), 9,466 men, 1,458 women, 10,924 total, 11% of all, 87% men and 13% women; natural sciences (58 schools), 2,227 men, 1,140 women, 3,367 total, 3.4% of all, 66% men and 34% women; health (121 schools), 1,466 men, 9,909 women, 11,375 total, 11.5% of all, 13% men and 87% women; arts and humanities (123 schools), 14,244 men, 11,907 women, 26,151 total, 54% men and 46% women; social science and public service (107 schools), 5,662 men, 5,814 women, 11,476 total, 11.6% of all, 49% men and 51% women; business contact and marketing (113 schools), 6,649 men, 2,997 women, 9,646 total, 9.7% of all, 69% men and 31% women; business detail and office (139 schools), 4,888 men, 11,558 women, 16,446 total, 16.6% of all, 30% men and 70% women; and grand total (179 schools—not all schools had enrollments in all programs), 53,613 men, 45,515 women, 99,128 total, of whom 54% were men and 46% women.

Comparison of program choices between all enrollees and freshmen. Although the differential in the percentage of the total enrollees as compared to the freshmen in most cases was not significant, a comparison of the enrollments by program of the two groups on a percentage basis is reflective of the changes underway in enrollment patterns. The program in which the difference in election between the two groups was the greatest was in health, where the percentage of total enrollees was 9.8% and that for freshmen was 11.5%. The second highest percentage difference was in the arts and humanities, elected by only 26.4% of the freshmen but by 28.5% of all enrollees. The business detail and office program area was chosen by 15.3% of all enrollees but by 16.6% of the freshmen. The percentage choices in the other programs by total enrollees and freshmen, respectively, were as follows: trades and industrial, 8.5% and 9.8%; technical, 11.2% and 11%; natural sciences, 3.2% and 3.4%; social science and public service, 12.4% and 11.6%; and business contact and marketing, 11.1% and 9.7%. The percentage spread of program enrollments by institutional types for total enrollees and freshmen, respectively, is shown in Tables 6 and 12.

Concluding observations. Although the 2-year institutions and the data cited for them in the two reports for 1973-74 and 1974-75 are not completely comparable statistically, in general the data suggest that career education programs still are growing but that the transfer programs are lagging only slightly behind. Indeed, with the increasing availability of educational opportunity in the 2-year institutions, the impact of recession conditions in the mid-1970s that suggests a "stay-at-home" status for many students in the first two collegiate years, and the enhanced academic respectability in the 1970s of the 2-year colleges and their faculties, it is likely that the transfer-oriented programs for the baccalaureate-bound students will maintain or even increase their importance in the next 5 years. Continuing

education courses and programs beyond their specialities, in the arts and humanities, for example, for those career education graduates who discover a need as well as desire for a broadening of their educational preparation for both personal and professional development should add greater dimension to the mission of the 2-year units. The need for career programs will not diminish but the acceleration in demand may slow down. In their own interest, in many cases, career education graduates will be well advised to pursue learning on a lifelong basis that will keep them up to date in their specialities and contribute to their life enrichment and professional advancement. In the remaining 1970s and the early 1980s, at least, the 2-year institutions will encounter a high demand for educational services in career as well as in transfer curricula but will need to consider carefully the balance to be maintained between the two program areas.

Acknowledgments and Definitions

Acknowledgments: The publication of a complex study such as this depends on the concern, understanding, support, and hard work of many persons. At the University of Cincinnati, recognition is extended to staff members Lynn M. Barber, Donna L. Ferneding, Margaret Stillwell, Judy Yanca, and Barbara Yohman for their invaluable aid in technical, administrative, secretarial, and clerical aspects of the project. Appreciation is expressed to Warren Bennis, president, and Gene D. Lewis, provost, for their understanding, interest, and support. To ACT for its sponsorship and to Oluf Davidsen, president, and C. Theodore Molen, vice president, Publications and Public Affairs, for their wise counsel and encouragement, the author is grateful. All of us are most indebted, however, to the registrars and other reporting officers who made the study possible by providing the indispensable data for the study.

Definitions used in this ACT Special Report. The general definitions used in this ACT Special Report are listed below.

The *full-time student* devotes substantially all of his or her working or study time to the college curriculum. This is interpreted generally to mean 12 collegiate-credit hours, presumably 75% of a normal load or more. The presumption is that these students are assessed full-time fees.

The *part-time student* normally takes collegiate-credit courses in the late afternoon, on Saturday, in the evening, frequently in the day, or by extension, and enrolls for fewer than 12 credits, or less than 75% of a normal load.

Freshmen are presumed to be full-time students classified as first-year or freshman undergraduate students. They are not necessarily first-time, degree-credit students, because such a restriction would preclude the listing of any students registered as freshmen who began their college work in the previous winter, spring, or summer.

Two-year college students are those enrolled in collegiate credit-hour courses in 2-year (certificate or associate degree levels) postsecondary junior and community colleges, other multi-purpose colleges, technical and/or vocational schools or institutes, and university branch colleges/campuses/centers (i.e., administered by 4-year institutions). It is presumed that all such enrolled 2-year collegiate credit-hour students are counted. For the purposes of this report, all reporting institutions are comprehended in the following four categories: junior, community, technical, and technical/vocational institutions.

The definitions of academic programs covered in this study are as follows:

1. *Trades and Industrial*: auto mechanics, drafting, machine work, other trades.

2. *Technical*: agriculture, engineering technologies, other technologies.

3. *Natural Sciences*: natural sciences related to 4-year collegiate programs.

4. *Health*: dental assisting, practical nursing, regular nursing, other health.

5. *Arts and Humanities*: liberal arts and the humanities.

6. *Social Science and Public Service*: cosmetologist, fireman, food service, police science, other social and public service fields.

7. *Business Contact and Marketing*: business administration related to 4-year programs, advertising, real estate, sales, transportation, other business contact and marketing fields.

8. *Business Detail and Office*: accounting, computer programming, data processing, secretarial science, other related fields.

Reporting institutions were asked to observe the following guideline:

"Only those students enrolled for collegiate-level credit in postsecondary 2-year junior and community colleges, other multi-purpose colleges, technical and/or vocational schools or institutes, and university branch colleges/campuses/centers that have regional association, professional organization, and/or state agency recognition, approval, or accreditation should be reported."
